

**Training in Anthroposophic Pharmacy:
Alchemical Roots to the Modern Production of Natural Medicines
New Five-year North American cycle 2022-2026**

First session: April 3-10, 2022, Chestnut Ridge, New York

For pharmacists, pharmacy students, and those involved in pharmacy research and production. The course is also open, on a limited basis, for experienced anthroposophic prescribers and others involved in the cultivation of healing plants.

With Albert Schmidli, PharmD, & Steven Johnson DO

"The way that substances are treated is basically what matters. And the way of thinking has to stop looking for the remedy just in the matter itself."

— Rudolf Steiner

The first four modules will be offered in conjunction with the four-year cycle of the Anthroposophic Medical Training. The training will cover the following topics:

Module 1: Understanding of substance; goetheanistic methods of observation; the four elements; four realms of nature (mineral, plant, animal, human); the four members of the human being; tria principia; the threefold functional organization of the human being; types of etheric forces; moving from the image of a plant to a remedy; potentization in liquid (WALA/WELEDA processes etc.)

Module 2: Pharmaceutical processes in the preparation of anthroposophic medical products (practicum): steps of warmth; rhythmic methods of preparation (WALA, Rh, etc.); potentization in the solid state; pharmaceutical compositions (e.g. Dorons); stabilized processes (syrups/glycerin); working with Insects (Apis, Formica); goetheanistic observation.

Module 3: Relationship between sevenfold planets processes, planetary metals, human organs and archetypal healing processes. Manufacture of metal mirrors, vegetabilized metals and other metallic compositions.

Module 4: Antimony and its preparations; Kalium aceticum comp.; organ preparations (video); galenic e.g. external applications (gels, ointments, cremes, oils), globuli, tbl.,trit. etc.; manufacture of a ointment (e.g. Aurum/Lavandula comp.); research and development.

Module 5: Mineral compositions after the image of a healing plant; goetheanistic observations of: minerals, quartz, limestone, phosphorus etc.); special pharmaceutical preparations (Cinis Capsellae comp., Olibanum comp., Solutio uliginosum, etc.); quality aspects for medicinal products (pharmacopoeia, APC); regulatory information; best practices; magistral preparation.

Our goal is to impart knowledge and skills about the production of anthroposophic medicines and to contribute to the worldwide sharing of Rudolf Steiner's medical impulse.
